Project Name	Car resale value prediction

Car Resale Price Prediction

Welcome

With difficult economic conditions, it is likely that sales of second-hand imported (reconditioned) cars and used cars will increase. In many developed countries, it is common to lease a car rather than buying it outright. After the lease period is over, the buyer has the possibility to buy the car at its residual value, i.e. its expected resale value. Thus, it is of commercial interest to sellers/financers to be able to predict the salvage value (residual value) of cars with accuracy.

In order to predict the resale value of the car, we proposed an intelligent, flexible, and effective system that is based on using regression algorithms. Considering the main factors which would affect the resale value of a vehicle, a regression model is to be built that would give the nearest resale value of the vehicle. We will be using various regression algorithms and algorithm with the best accuracy will be taken as a solution, then it will be integrated to the web-based application where the user is notified with the status of his product.

Proceed

Please fill the details of your car:

AB Test : ☐ Test ☒ Control

Choose Vehicle Type :

Reg Year :

Gear Box Type : ☐ Manual ☒ Automatic

Power of car in PS :

Kilometer the car has driven:

Reg Month :

Choose Fuel Type :

Model Type :

Choose the brand of the Car :

Pin Code :

Is your car damaged : ☐ Yes ☒ No

Predict

The estimated price of your car is 6672.26

The price of any car over the years depreciates and is dependent upon various factors that determine the resale value of the car. These factors range from year of purchase, make, model, kilometers driven and overall condition of the car. Used car valuation incorporates all these factors into the pricing model that takes into account data from millions of buyers & sellers of used cars to determine the most accurate price range for your car.
